TECHNICAL DESCRIPTION

M2011

Model M2011 is a Stadium seat with double backrest which grants the user to enjoy the sport event in the maximum comfort without sacrificing strength and durability.

Designed by designer Giovanni Baccolini that in cooperation with OMSI wanted to reinterpret design and comfort of the plastic bucket shells.

FIFA/UEFA recommendations and FIBA approved, complying with the European standards UNI EN 13200-1-4; tested by appropriate national and certified labs, specialized with wood and furniture.

M2011 also complies with European standards UNI EN 12727:2017 (level 4 – severe).

Injection moulded with first quality coloured copolymer polypropylene, fire resistant reaction class 1, also addicted with Anti-UV treatment (standard or long range) to ensure maximum resistance to UV insulation rate.

The seat is made from a solid base with reinforcing transversal ribs 2,5/3 mm thick and increased thickness next to the fixing points making it exceptionally strong. The edge is 6 mm thick all along the seat perimeter to the back and prevents the grip in case of vandalism. Thick (4 mm) and wide ribs also connect the two back walls and ensure an exceptional resistance to rear kicks

The surface of the seat is shiny and smooth to prevent dirt accumulation and facilitate cleaning

Finishing of backrest provides horizontal lines to make the surface non slipping. The drainage of the liquids occurs by gravity by means of an integrated hole in the seat design that drives the liquids in the rear avoiding any kind of stagnation in the central part of the shell. Curved front edge with right-angle base overlapping terrace front

Fixing holes are protected by appropriate vandalism proof closing covers provided in the same colour of the seat.

In a clearly visible position on the front, we can provide a logo/sponsor name directly injected on the shell from the mould.; alternatively, using an aluminum plate fastened with rivets.

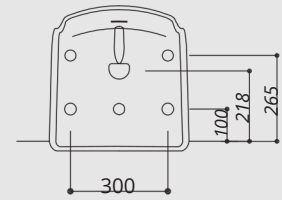

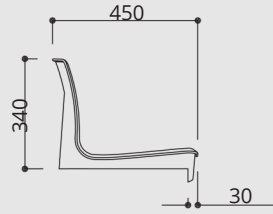

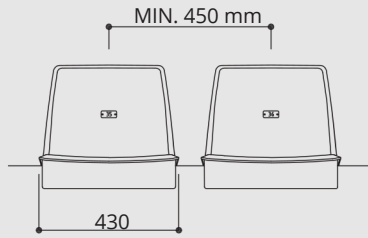

The dimensions are: width 430 mm, depth 450 mm – 400 mm for small version, height 340 mm.

Seat numbers, 45x18 mm are made with plastic material (or aluminium) and are located in the appropriate slot in the front part of the seat for easier viewing from below by climbing the steps. The plate is fixed using n.2 rivets 3,2x7 mm.

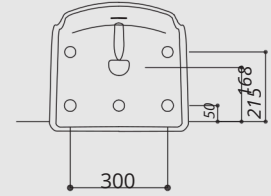

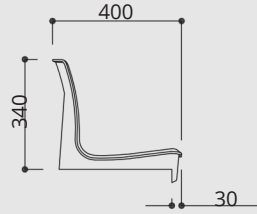

Installation options

1. Direct on concrete step in 4 points with M8/M10 anchors;
2. Riser mounted on a polyamide or metal bracket in 4 points using M8/M10 anchors;
3. Floor mounted on metal beam fixed to the step floor in 4 points with M8/M10 anchors;

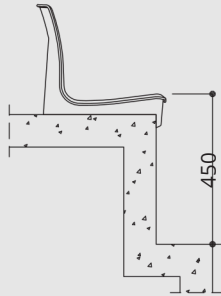

FIFA Recommended 500 mm

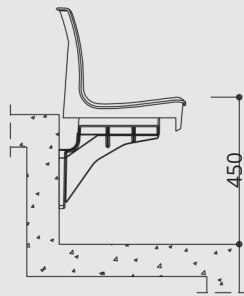

ON REQUEST:
M2011 SMALL

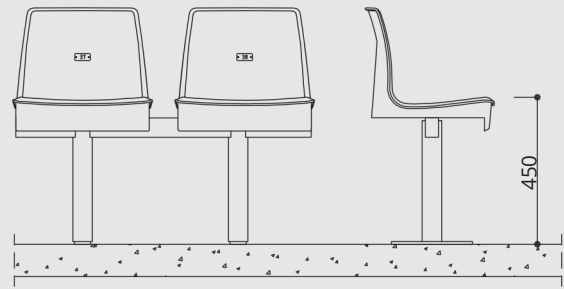

> DIRECTLY ON STEP

> RISER MOUNTING*

> SON METAL BENCH

* Possibility to choose between polyamide or metal bracket
