TECHNICAL DESCRIPTION

leonardo

SILVER

Leonardo Silver is a new armchair with modern and elegant lines, the perfect combination of comfort and luxury, offering the highest level of quality and durability. This unique Italian design stems from Pininfarina's extensive experience in the automotive sector, always focused on passenger comfort. Here, this expertise is translated into a chair with a fully enclosed side panel that conceals structural elements, seamlessly blending style and functionality thanks to the use of highly advanced materials, designed to perform even under adverse weather conditions and high humidity.

This armchair prioritizes spectator well-being, ensuring maximum safety through the use of fire-retardant materials. It is designed to bring families back to stadiums, offering an unparalleled emotional experience. Characterized by welcoming and harmonious curves inspired by the iconic lines of luxury automobiles, the LEONARDO chairs are ideal for placement in the most prestigious areas of sports facilities and conference rooms.

A unifying design thread connects and furnishes an entire stadium, from General Public zones to Hospitality, VIP, VVIP Press, Media areas, locker rooms, and players' benches. Entirely manufactured in Italy and environmentally conscious, the LEONARDO chair is 100% recyclable and uses recycled materials. It complies with FIFA/UEFA/FIBA standards, meets European regulations UNI EN 13200 1-4, and is tested in accordance with European standard UNI EN 12727:2017.

The supporting structure, side panels, and seat support are made using injection technology with recycled polyamide reinforced with fiberglass. The backrest support is produced through rotational molding using copolymer polypropylene derived from post-consumer and/or industrial waste, which is fire-retardant (fire reaction class 1) and UV-resistant. The integrated armrests in the side panels are covered with expanded polyurethane and can be customized with integrated cup holders or a writing tablet.

The seat reclines by gravity, through a hidden and inaccessible counterweight placed in a dedicated compartment. It is equipped with dampers to ensure a smooth and controlled closure. The end panels can be made of lacquered rigid polyurethane or ABS produced using injection technology.

LEONARDO chairs are highly customizable: upholstery options include fabric, velvet, leather, or eco-leather, with a wide selection of colors, combinations, and finishes, including embroidered logos or text. Additional customization is available through various optional features.

The chairs are mounted directly onto the step tread at four points using expansion anchors, providing exceptional anti-vandalism durability. The chair is fully disassemblable, with no visible assembly screws, ensuring a sleek and clean appearance.

OPTIONAL FEATURES:

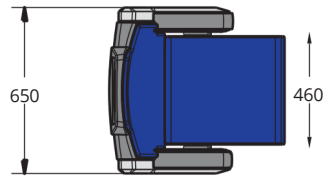

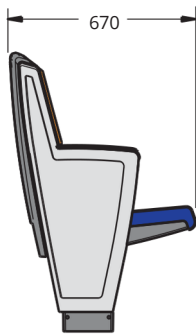

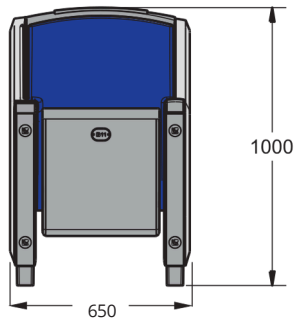

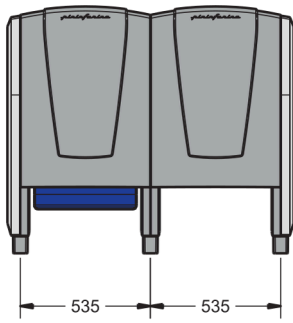

- USB port
- Heated seat and backrest
- Cup holder
- Writing tablet/desk
- Tablet with integrated monitor
- Fixed seat
- Upholstered underside in matching color
- QR code

CHAIR TYPES:

- LEONARDO SILVER 497: Chair with a low backrest, painted polyurethane side, 535 mm center-to-center distance, arranged in a row.
- LEONARDO SILVER 457: Chair with a low backrest, low ABS side, 535 mm center-to-center distance, arranged in a row.
